

Our waste prevention in schools programme 2024/5

November 2023

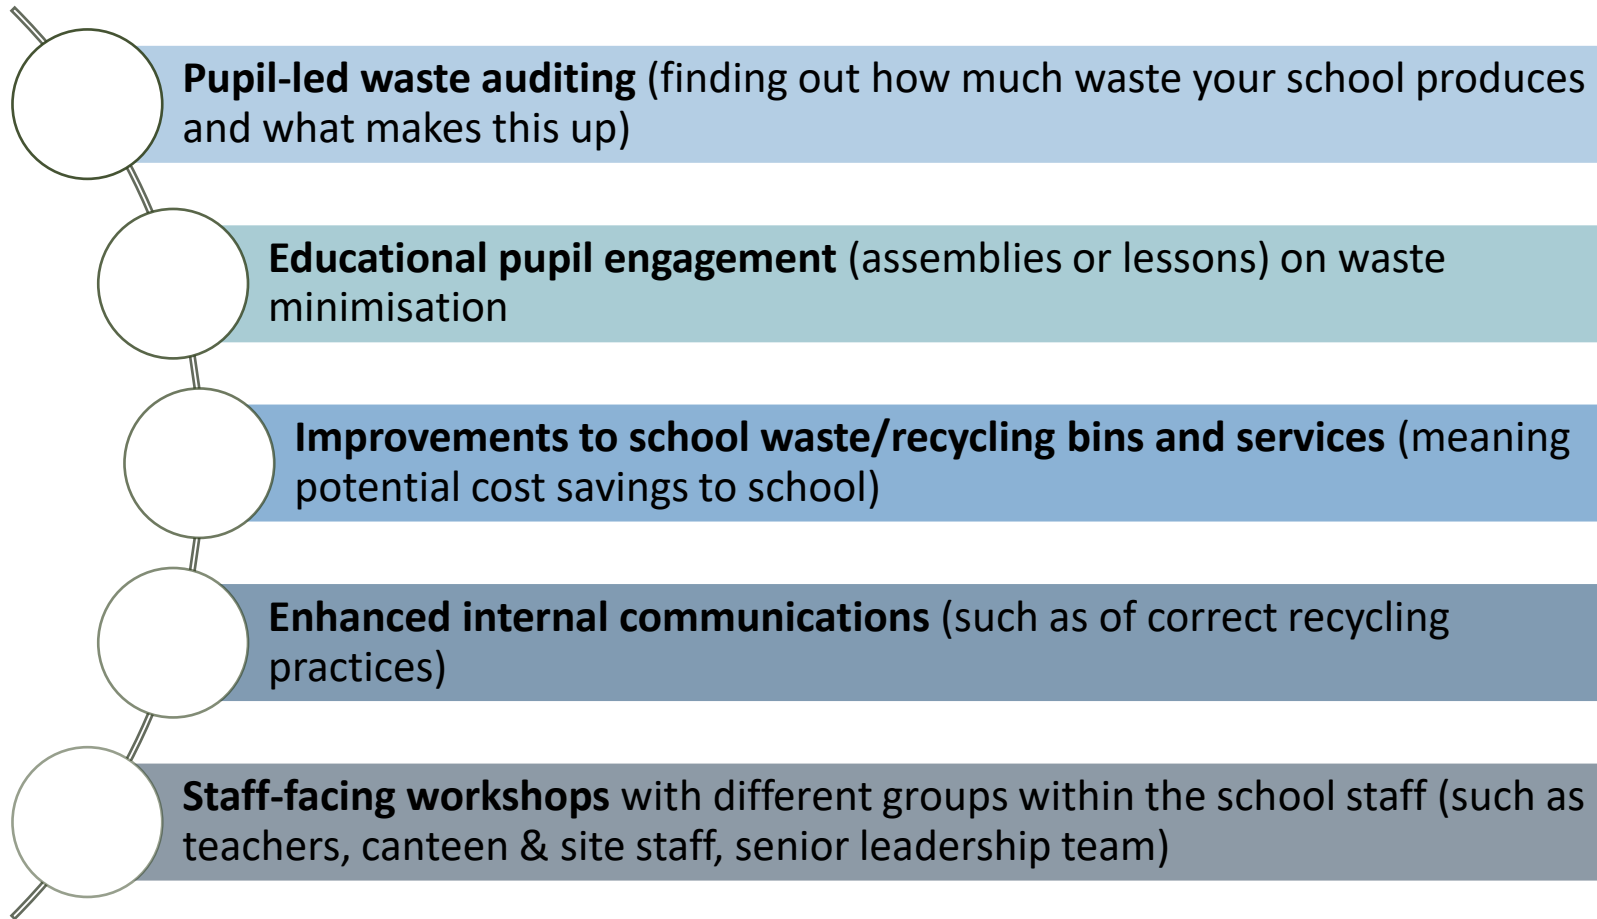

Context

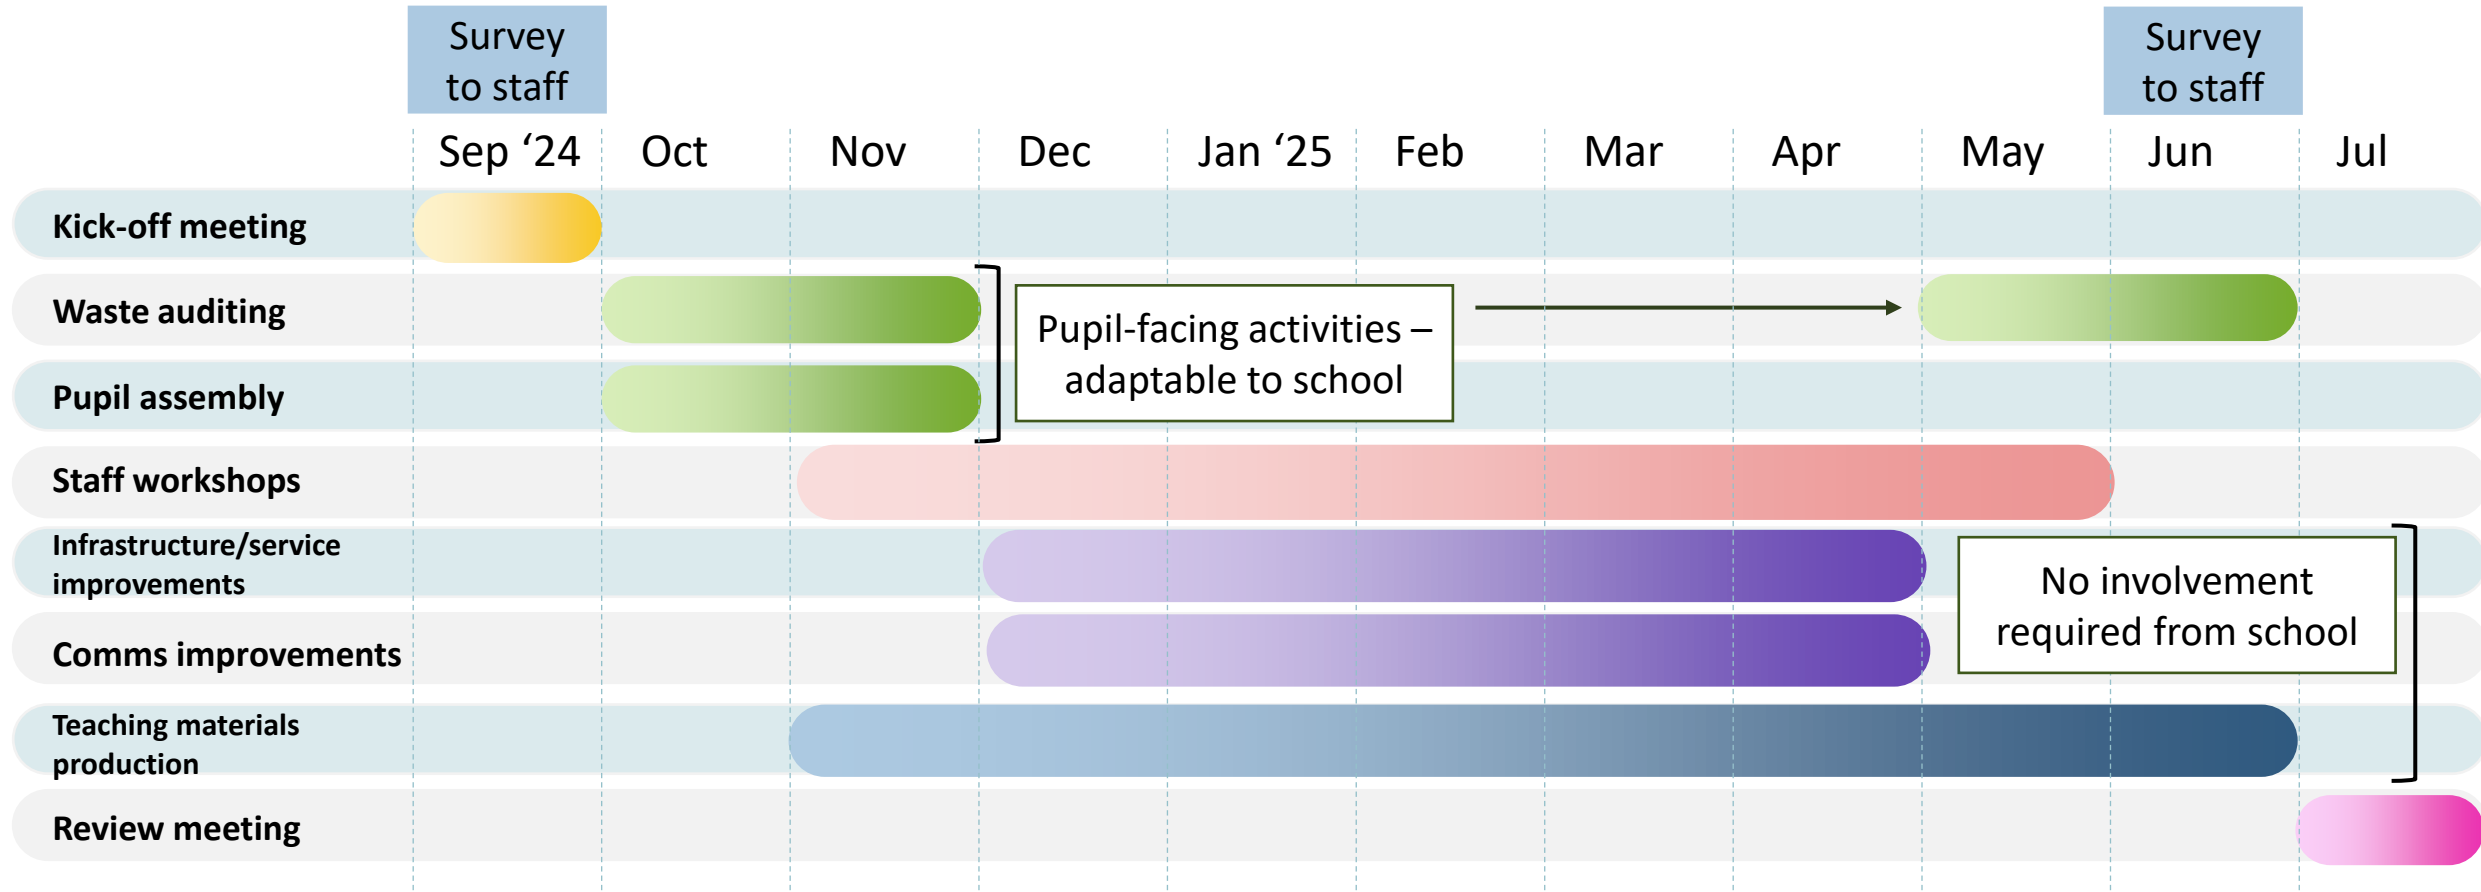

We conducted a research project in 2022 with north London's primary schools. One of the key recommendations to reduce the waste produced on school premises was to run an outreach programme to educate, enable and motivate all on the school site to reduce waste, recycle more and improve their impact on the planet.

We will conduct an outreach programme throughout the 2024/5 academic year, with the main objective: ***to establish a culture of waste prevention within the schools we work with.***

Our waste prevention outreach proposal

Proposed timeline

Like to know more?

We'd like to hear from schools! Could you help us by answering these questions?

- What is currently taught at your school around waste prevention, such as reducing, reusing, recycling and other sustainable waste behaviours?
- What would you like to see included in the primary schools' outreach programme NLWA delivers, such as activities, materials and topics covered?
- Do you have any feedback relating to our proposal?

We want to involve north London's primary schools in the design of our outreach programme!

The 'consultation' will involve a **30 minute call** with our Waste Prevention Team.

To say thank you, we will arrange **either a trip to our Eco Park** in Edmonton for your pupils, or **a visit to your school** from our partners at the [North London Heat and Power Project](#)!
